

HEALTH AND SAFETY AND GOOD WORKING PRACTICES

Why Health and Safety Matters

Maintaining both productivity and well-being while working from home requires a safe and comfortable setup.

This training aims to guide you in avoiding long-term health problems that may result from poor ergonomic practices or ineffective work habits.

Its purpose is to help you understand your responsibilities in upholding health and safety standards as a remote worker.

Ergonomic Workspace Setup

Topics:

- **Chair:** Use an adjustable chair with lumbar support.
- **Desk:** Keep your desk at elbow height.
- **Monitor:** Position your screen at eye level and about an arm's length away.
- **Keyboard & Mouse:** Align your wrists straight and use a mouse pad with wrist support.

Chair and Desk

Ensure you use a supportive office chair that:

- Fits your body size
- Provides proper lumbar support
- Matches your ideal sitting height
- Includes armrests (preferably removable)
- Has a stable, sturdy base
- Can be easily adjusted while seated

Make sure your desk:

- Sits slightly below your elbow level
- Is positioned for comfort and aligned with your chair height

Monitor

- The monitor should be directly in front of you
- Top of screen should be eye level
- A copy stand should be adjacent to or in front of the monitor
- Adjust brightness and contrast

Keyboard & Mouse:

Position your mouse at a comfortable height and close enough to prevent overreaching or awkward posture.

Keep your wrists in a neutral, straight position and consider using a mouse pad with built-in wrist support.

Staying Healthy While Sitting

- Maintain an upright posture with your back straight and feet flat on the ground.
 - Avoid sitting with crossed legs.
 - Take short 5-minute breaks every hour to stretch or walk.
 - Use options like a standing desk or balance ball to add variety.
 - Choose a well-designed, adjustable chair that provides proper support.
 - Ensure your desk and work surfaces are set at a comfortable height.
- Shift your sitting position regularly and include routine stretching sessions.

Posture and Movement

Frequent bending of your neck or back can lead to strain and discomfort.

When lifting or reaching for materials or equipment, keep your posture neutral and use the strength of your legs rather than your back.

Minimizing Eye Strain

Apply the **20-20-20 Rule**: Every 20 minutes, shift your gaze to an object about 20 feet away for at least 20 seconds.

Minimize screen glare by using anti-glare filters and adjusting your monitor's brightness.

Work in well-lit areas with indirect or task lighting to avoid harsh reflections and washed-out screens.

Book routine eye check-ups to maintain good eye health.

Time Management and Mental Health

Set clear boundaries between work and personal life.

- Create a daily routine with defined work hours.
- Use tools to track tasks and avoid overworking.
- Stay connected with colleagues to reduce isolation.

Safety Considerations

- Keep walkways and work areas free from clutter.
- Ensure electrical cords are secure to prevent trips.
- Use surge protectors to safeguard devices.
- Check smoke alarms and know emergency contacts.

Emergency Preparedness

- Keep a first aid kit easily accessible.
- Be aware of where your home's fire extinguisher is located.
- Prepare a contingency plan for potential power failures or internet issues.
- Back up your work files regularly to avoid data loss.

Key Takeaways

- Prioritize an ergonomic setup.
- Take regular breaks and stretch.
- Protect your eyes and mental health.
- Stay organized to prevent home hazards.
- Be prepared for emergencies.
